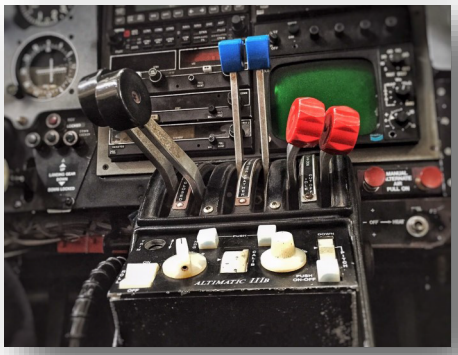
Training Courses

Multi Engine Rating



A Multi-Engine rating qualifies you to fly an Aircraft with more than one engine. Loutzavia Flight Training Centre uses several Beechcraft Baron BE55 Aircraft, powered by two 260 HP fuel-injected Continental engines. (To view the aircraft visit our Advanced Training Fleet).

Part of the Multi -Engine Training can be done on our Frasca Tru-Flight Simulator. It is a safe and more cost–effective alternative. (To view our state of the art simulator visit Our Simulator).

To obtain a Multi -Engine Rating you will need a PPL with a minimum of 150 total flying hours.

All Multi-Engine conversions are given by our highly skilled and qualified senior Grade II Multi-Engine Instructors, all of whom have an excess of 1500 hours flying experience.

Multi-Engine training consists of:

- A Technical Examination on the Multi-Engine aircraft.
- A minimum of 7 Hours Multi-Engine training towards a conversion on the Aircraft, of which 2 hours can be done on our Flight Simulator.
- 20 Hours of Instrument Training (of which 5 hours can be done on our Simulator, 5 hours can be done on a Single -Engine Aircraft and 10 hours can be done on a Multi-Engine aircraft.)

The duration of the Course usually takes 3 to 4 weeks, depending on your finances and training performance.
